230V

Cross-shaped corner joint. By linking 230V tracks, this kind of joint makes it possible to extend the track structure in all directions, extending and distributing light evenly throughout the room to create omnidirectional lighting. This kind of joint allows the electrified track to be extended in all directions. When it's necessary to regulate and divide the lighting in particular sections of an open or large space—for example, to draw attention to work areas, display areas, transit routes, etc.—this is especially helpful.
